ConverTiger

We bring a new way of measuring users on dynamic websites.

ConverTiger: See website recordings. Fix problems. Convert your website visitors into customers.

BRNO, Czech Republic – September, 1 2015 – Are you still wondering why is it that your website users don't convert? Are you tired of guessing why visitors don't complete their purchase and abandon their cart? Or is it that you are looking for a way to “read” your users' minds while they browse on your site? If you answered “Yes” then we are pleased to introduce to you ConverTiger.com. [ConverTiger](http://ConverTiger.com) enables you to gain a deep insight on what people are doing on your website by viewing video recordings. See for yourself WHY visitors don't convert.

[video: https://www.youtube.com/watch?v=0TFNNhz_i7o]

“It wasn't long ago when I asked myself why conversion rates were so low. So, like many business owners, I invested in a tool to find out how people interacted with our site. We tried many tools for OrganizeTube.com but they all failed in providing us with valuable insights due to the complexity of our dynamic website. Because of our “demanding” site and our need for quality, informative records and meaningful features, we decided to build something that's tailored to our needs. So, we created ConverTiger to help us make better informed decisions based on the knowledge attained by it. And I am sure that this solution will empower our users because it did the same thing for me and my company, OrganizeTube.” says Vladimir, the CEO of OrganizeTube.

[ConverTiger](http://ConverTiger.com) is the must-have tool for professionals and businesses that operate in the fields of Marketing, UX, UI and Web Development and anyone that needs to find out why their conversion rates are low. The key features that set it apart are:

Sessions: Our session recording software allows you to see each mouse movement, click and activity of your visitors even on dynamic websites. Just press play and see the recording of your choice.

Funnels: Have you ever set up conversion funnels? Then, you might know that, with other tools, you can only apply funnels to newly collected data. What if you wanted to use the data you already collected and apply the funnels retrospectively? Why should one "reckless" moment cost
